

CYBER-RISK EXPOSURE SCORECARD - MOTOR

Motor carriers and drivers may not seem like high-priority targets for hackers, but the reality is that the transport industry is one of the most frequent targets for cyber-attacks. Customer data, supply chain logistics, data lists and product data can be extremely valuable to hackers. Additionally, motor carriers and individual drivers can be put at greater risk because of outdated data systems, unsecured vehicles, location-based tracking systems and more.

If any of your business devices or vehicles are compromised, you could face ransomware attacks, social engineering schemes or even physical damage if a vehicle has self-driving technology. You also need to protect your customers' and employees' personal information, as a data breach can lead to damaging legal action and a tarnished reputation.

Instructions: Begin by answering the questions below. Each response will be given a numerical value depending on the answer:
Yes: 5 points | **No:** 0 points | **Unsure:** 5 points

After completing all of the questions, total your score to determine your level of cyber-risk using the scale below.
